

Java TracerTM

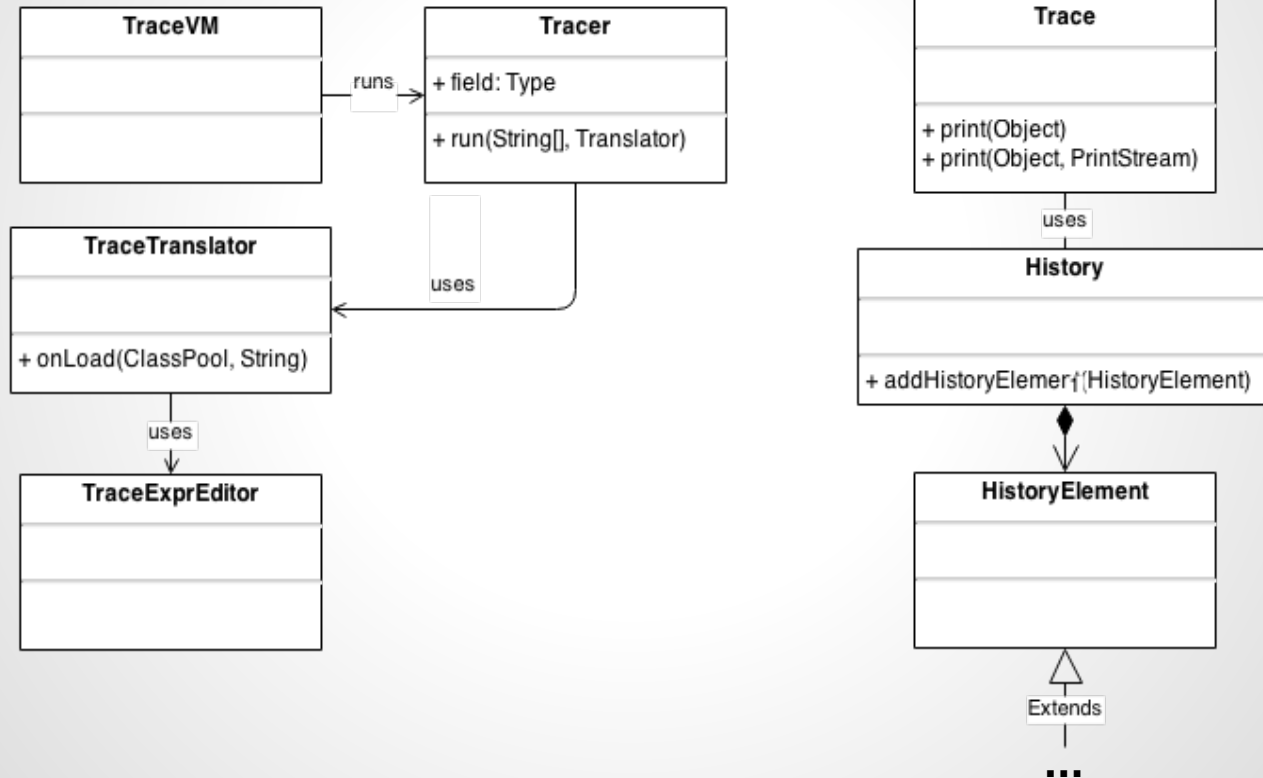

Overview

1. What is Java Tracer™?
2. Architecture
3. Usage
4. Extended Version

What is Java TracerTM

- An API for developers
- Tracks method and constructor calls, among other things
- Uses Javassist to inject the necessary code

Architecture

Usage

- Just use our *AWESOME* API:
 - `Trace.print(Object)`
- Extended only features:
 - `Trace.print(Object, PrintStream)`
 - `Trace.print(Object, Iterable<PrintStream>)`

Extended Version

We decided to add a few extra features to our JavaTracer™:

- Field access tracing
 - -> WRITE
 - <- READ
- Explicit cast tracing [<>]

Example (Code)

```
class Foo {  
    String field;  
  
    Foo(String field) {  
        this.field = field;  
    }  
}
```

Example (Code)

```
class Foo {  
    String field;  
  
    Foo(String field) {  
        this.field = field;  
    }  
}
```

```
class Bar extends Foo {  
    int field2;  
  
    Bar(String field, int field2) {  
        super(field);  
        this.field2 = field2;  
    }  
}
```

Example (Code)

```
class Foo {  
    String field;  
  
    Foo(String field) {  
        this.field = field;  
    }  
}
```

```
class Bar extends Foo {  
    int field2;  
  
    Bar(String field, int field2) {  
        super(field);  
        this.field2 = field2;  
    }  
}
```

```
public class OurTest {  
  
    public static void main(String[] args) {  
        Foo foo = new Bar("Hello", 0);  
        Bar bar = (Bar) foo;  
        Trace.print(foo);  
    }  
}
```

Example (Code)

```
class Foo {  
    String field;  
  
    Foo(String field) {  
        this.field = field;  
    }  
}
```

```
class Bar extends Foo {  
    int field2;  
  
    Bar(String field, int field2) {  
        super(field);  
        this.field2 = field2;  
    }  
}
```

```
public class OurTest {  
  
    public static void main(String[] args) {  
        Foo foo = new Bar("Hello", 0);  
        Bar bar = (Bar) foo;  
        Trace.print(foo);  
    }  
}
```

Output:

Example (Code)

```
class Foo {  
    String field;  
  
    Foo(String field) {  
        this.field = field;  
    }  
}
```

```
class Bar extends Foo {  
    int field2;  
  
    Bar(String field, int field2) {  
        super(field);  
        this.field2 = field2;  
    }  
}
```

```
public class OurTest {  
  
    public static void main(String[] args) {  
        Foo foo = new Bar("Hello", 0);  
        Bar bar = (Bar) foo;  
        Trace.print(foo);  
    }  
}
```

Output:

Example (Code)

```
class Foo {  
    String field;  
  
    Foo(String field) {  
        this.field = field;  
    }  
}
```

```
class Bar extends Foo {  
    int field2;  
  
    Bar(String field, int field2) {  
        super(field);  
        this.field2 = field2;  
    }  
}
```

```
public class OurTest {  
  
    public static void main(String[] args) {  
        Foo foo = new Bar("Hello", 0);  
        Bar bar = (Bar) foo;  
        Trace.print(foo);  
    }  
}
```

Output:
Tracing for ist.meic.pa.test.Bar@5d7138f4

Example (Code)

```
class Foo {  
    String field;  
  
    Foo(String field) {  
        this.field = field;  
    }  
}
```

```
class Bar extends Foo {  
    int field2;  
  
    Bar(String field, int field2) {  
        super(field);  
        this.field2 = field2;  
    }  
}
```

```
public class OurTest {  
  
    public static void main(String[] args) {  
        Foo foo = new Bar("Hello", 0);  
        Bar bar = (Bar) foo;  
        Trace.print(foo);  
    }  
}
```

Output:
Tracing for ist.meic.pa.test.Bar@5d7138f4

Example (Code)

```
class Foo {  
    String field;  
  
    Foo(String field) {  
        this.field = field;  
    }  
}
```

```
class Bar extends Foo {  
    int field2;  
  
    Bar(String field, int field2) {  
        super(field);  
        this.field2 = field2;  
    }  
}
```

```
public class OurTest {  
  
    public static void main(String[] args) {  
        Foo foo = new Bar("Hello", 0);  
        Bar bar = (Bar) foo;  
        Trace.print(foo);  
    }  
}
```

Output:
Tracing for ist.meic.pa.test.Bar@5d7138f4

Example (Code)

```
class Foo {  
    String field;  
  
    Foo(String field) {  
        this.field = field;  
    }  
}
```

```
class Bar extends Foo {  
    int field2;  
  
    Bar(String field, int field2) {  
        super(field);  
        this.field2 = field2;  
    }  
}
```

```
public class OurTest {  
  
    public static void main(String[] args) {  
        Foo foo = new Bar("Hello", 0);  
        Bar bar = (Bar) foo;  
        Trace.print(foo);  
    }  
}
```

Output:
Tracing for ist.meic.pa.test.Bar@5d7138f4

Example (Code)

```
class Foo {  
    String field;  
  
    Foo(String field) {  
        this.field = field;  
    }  
}
```

```
class Bar extends Foo {  
    int field2;  
  
    Bar(String field, int field2) {  
        super(field);  
        this.field2 = field2;  
    }  
}
```

```
public class OurTest {  
  
    public static void main(String[] args) {  
        Foo foo = new Bar("Hello", 0);  
        Bar bar = (Bar) foo;  
        Trace.print(foo);  
    }  
}
```

Output:

Tracing for ist.meic.pa.test.Bar@5d7138f4

-> WRITE field 'field' on OurTest.java:19

Example (Code)

```
class Foo {  
    String field;  
  
    Foo(String field) {  
        this.field = field;  
    }  
}
```

```
class Bar extends Foo {  
    int field2;  
  
    Bar(String field, int field2) {  
        super(field);  
        this.field2 = field2;  
    }  
}
```

```
public class OurTest {  
  
    public static void main(String[] args) {  
        Foo foo = new Bar("Hello", 0);  
        Bar bar = (Bar) foo;  
        Trace.print(foo);  
    }  
}
```

Output:

Tracing for ist.meic.pa.test.Bar@5d7138f4

-> WRITE field 'field' on OurTest.java:19

Example (Code)

```
class Foo {  
    String field;
